## DOGNÆDIS presents award winning CodeV

Posted on 04. Jun, 2012 by CWZ [Add new comment](#)

**DOGNÆDIS CodeV** is a computing framework that performs automatic source code analysis to detect security vulnerabilities with a focus on web applications.

In preliminary tests CodeV analyzed several well known and widely used Open Source software and found several 0 day vulnerabilities, 3 of them critical, all released in a responsible disclosure fashion.

These can be found [here](#).

### Power of CodeV

This tests show the power of CodeV even against highly tested and scrutinized OpenSource software.

Available as SaS or Appliance to be integrated in the software development life-cycle (e.g. Subversion/svn), or embedded into Eclipse®, Visual Studio® and other IDEs.

### Trial

For a trial of CodeV's capabilities, please click this [link](#) and test up to 250 lines of code, receiving an instant report.

### Contact

For further information or inquiries contact [codev@dognædis.com](mailto:codev@dognædis.com).
